

## How overall qubits are composed

[home](#)

Creation Ex Nihilo

A prior to the creation of the universes  $2^{280}$  entities of high intelligence unified their minds of which the square root of those opposite the Creation our Cosmos causing the duality in the objective laws of nature.

The diversity in species or human unique personalities has a maximum of  $2^{40}$  qubit, electron based due to ultra light dark matter network or medium. For humans reaching the diversity of souls is the end game of evolution of humanity or an intelligent race in general in our cosmos.

### HOW $2^{280}$ QUBITS MAY BE COMPOSED

Duality of our Cosmos

Qubits electron to proton:  
Electrons:  $2^{40}$  protons:  $2^{30} = 2^{(14 \text{ or } 16)}$   
One bit for reciprocal electron/proton  
Total:  $2^{40 + 30} = 70$

One bit to time and 3D space of dark matter  $2^{140}$   
Then  $2^{40 - (32 \text{ or } 28)} = 8 \text{ or } 12$

10 to 12 qubits to explain:  
Three qubits for the three pseudo vector components  
Three qubits for Matter/ anti M: Normal M to conjugated M: time to anti time  
One qubit for c-speed and  $\frac{1}{2}c$  of pseudo cells  
Photons + dm  
One qubit for radial momentum and the angular momentum tangentially  
One qubit for electric charge to magnetic Lamb  
One qubit for the asymmetry of the Nothing

The  $2^{280}$  qubits are the reflection manifestation of the intelligences creating the universes a prior to creation ex nihilo. May be in fact the electrons are frozen consciousness in matter just according to Teilhard De Chardin

Comment December 2022. The qubit state of the electron of about a thousand billion qubits can best be compared to a giant quantum computer to which biological life is subjected resulting after a long time of evolution in the diversification of intelligent beings. However on the other hand quantum dynamics of the electron defined here, contains overall also the goal consciousness of mankind. One goal may be the survival of the earth calamity in case the rotation axis of Earth undergoes a sudden precession shock. Secondly mankind is subjected to extremes the law of survival of the fittest against

the one of altruistic care. It is like the biblical story of Cain and Abel. One Son is the good fellow and the jealous one is always trying to dominate.

Einstein's idea of 'God does not throw dice' is correct in the sense of physics. It can be shown that our Cosmos complies in its final state of the evolution of what in the mathematics of group theory is known as the monster symmetry. This symmetry of  $8.08017 \cdot 10^{53}$  integers in the natural numbers, complies the overall mass of apparently 12 universes, six objects (universes) for time and the another six for anti time, shown as the picture of the pyramid for the website. See for the derivation, more for mathematicians/ group symmetry. See also Planck's derivation

[Mathematics of group symmetry](#) and [derivation Planck parameters](#)

Note, at present the 'poles' of altruistic care and the opposite (ego power) are 'dissolved' overall in humanity. However it may be likely that the square root rule given as the symmetry condition of the Nothing, in above table, determines the immaterial state of altruistic care and the opposite survival of the fittest in matter .
